Node.js and Express.js
Lab 09

Task 1

In Task 1 of Lab 7, you created a database for your restaurant application and wrote PHP codes to manage data and support all functions needed by the front-end.

In this task, you will use Express.js and all APIs for the restaurant application. This will include APIs for menu items and user authentication. You can use the same database as in Lab 7.

Test your APIs using Postman.

Task 2 (Optional)

Connect the APIs you developed in Task 1 to the front-end. Your application must be fully functional.

Task 3

Practice Node.js using https://www.w3schools.com/nodejs

Practice Express.js using https://www.tutorialspoint.com/expressjs
